## COVID-19 Impacts on Emissions and Air Quality

Emissions and their impacts on air quality are primarily the result of two sources:

- . transportation (cars, trucks, public transit, etc.)
- . building energy consumption (i.e., "point sources")

"Shelter-in-place" policies and temporary closings of businesses and office buildings may result in a noticeable decrease in air borne concentrations of PM, NOx, ozone, aerosols, etc.

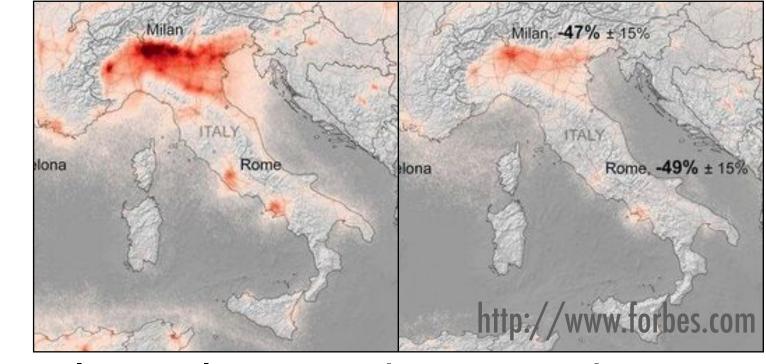

Is There Evidence for such a Decrease in Delaware?

## Potential data sources:

- EPA air quality monitoring stations
- DE Dept of Natural Resources and Environmental Control

## Mentors:

Prof. Sally Dodson-Robinson (Physics & Astro)
Prof. Greg Dobler (Biden School; Physics & Astro)
