# *Equitable Access to Digital Healthcare and Education in Delaware*

- Is it possible to get enough devices into homes? How many are needed?

- Where would network improvements be most valuable?

- How can we teach those that need help with technology using only that technology?

- How can we preserve privacy for medical appointments? Keep order and engagement in classrooms?

- We might have time to prepare before another phase of social distancing, what should we do in that time?

**use census+ data to map where healthcare and eduction resources are needed**

DELIVERABLES:

Maps: a map or series of maps tracking broadband access and of the stress
Recommandations: identify the locations in the State where the need for broadband is most severe.

SKILLS:

***Coding, GIS, data collection, data processing, data fusion, visualizations, mapping, census***
